

Environmental Policy

Document Reference: DPQA0001054

Document Version: 002

Effective Date: 30th June 2026

Environmental Policy Statement

At Display Protect Solutions, we recognise our responsibility to minimise the environmental impact of our operations. As a manufacturer of polymer and glass cover lenses, we are committed to protecting the environment through sustainable practices, legal compliance, and continuous improvement. Environmental performance is integrated into our strategic planning and day-to-day activities.

Key Principles of Our Environmental Policy

1. Legal and Regulatory Compliance

We meet or exceed all applicable environmental legislation, regulations, and codes of practice relevant to our business activities.

2. Pollution Prevention

We take active steps to prevent pollution by managing emissions, reducing harmful discharges, and safely handling all materials and waste.

3. Resource Efficiency

We aim to use energy, water, and raw materials efficiently. Our processes are designed to minimise waste and maximise productivity.

4. Sustainable Procurement

We work with suppliers who share our environmental values and encourage the use of sustainable, recyclable, and responsibly sourced materials.

5. Waste Management and Recycling

We reduce, reuse, and recycle materials wherever possible. Hazardous waste is managed and disposed of safely and in accordance with regulations.

6. Continuous Improvement

We regularly monitor our environmental impact and set measurable objectives for improvement. Environmental performance is reviewed annually.

7. Employee Engagement and Training

We provide staff with the knowledge and resources needed to support our environmental goals and promote environmental awareness across all roles.

8. Environmental Responsibility in Design

We consider environmental impact throughout the product lifecycle, from material selection to end-of-life disposal.

Our Commitment

This Environmental Policy is communicated to all employees, suppliers, and stakeholders. It is reviewed annually to ensure it remains relevant to our operations and supports our commitment to environmental stewardship. We are working toward a clearly defined goal of achieving Net Zero carbon emissions by 2028.
